1. shell commands:

- ls
 - -F: show extra information like "/" at the end of a folder
- man [function] - show help page for function
- cd : change directory
- pwd : print working directory
- nano : text editor for the command line
- touch : makes a new blank file (or updates the modified time of an existing file!)
- mv [input] [output] : moves file from input to output
 - -i : interactive, will ask you if you want to overwrite
